

Capstone: From Data Collection to AI, end to end

Read this first. It ties everything together and explains how your group project is graded. Basahin muna bago simulan ang capstone.

1 · Reading (you are here)

2 · Capstone — Form to AI

1. The whole flow in one picture

Google Form + image upload

Google Sheet

Colab: analyze + visualize

Teachable Machine: identify + confidence

Your capstone connects **every skill from Weeks 1 & 2** into one product: you **collect** data with a form (Week 1), **store** it automatically in a Sheet (Week 2 pipeline idea), **analyze and visualize** it (Week 1 EDA), and apply an **AI model** to identify the uploaded images (Week 2 AI).

Tagalog: pinagsasama ng capstone ang lahat ng natutunan — kolekta, imbak, suri, at AI — sa iisang proyekto.

2. Each stage, conceptually

1. **Collect** — a short Google Form (application/enrollment) with **one image-document upload**.
2. **Store** — responses + each image's Drive link land in a linked **Google Sheet** automatically.
3. **Analyze** — the notebook reads the Sheet, describes the data, and **charts** the responses.
4. **Interpret** — you write 2–3 sentences on what the charts say.

5. **AI** — your Teachable Machine model **identifies each uploaded image** and reports its **confidence**; low-confidence ones are flagged for human review.

Ownership note: a form file-upload saves to the **form owner's** Drive, so the notebook must be run by that **same Google account** — otherwise it can't read the images.

3. How the rubric works (20 points)

Your grade rewards a **complete, honest, end-to-end** product, not fancy tricks. The full point breakdown is in the **Capstone Guide**, but conceptually it covers:

Area	What graders look for
Data collection	A working form with an image upload + a linked Sheet of real responses.
Analysis & visuals	The notebook connects to the Sheet and produces clear charts.
Interpretation	A written, honest reading of what the data shows.
AI + confidence	Each image identified, with a confidence read-out and review of low-confidence ones.
Presentation	A 3-minute story: collected → shown → how well the AI performed.

Tagalog: ang puntos ay para sa kumpleto at tapat na proyekto mula simula hanggang dulo — hindi sa pagiging komplikado.
